Postgraduate Studies

International Finance

I never realised it would be so easy! I can apply financial skills on my own!

International Finance Graduate

Take your career further with practical, real-world financial expertise.

100% live-online, intensive, practical and ambitious programme offered jointly by SGH Warsaw School of Economics and the EY Academy of Business, addressing professionals for whom Finance is essential for their career advancement.

Candidates join from a *wide range of professions and industries* – including legal, accounting, marketing, HR, sales, IT, banking, retail, consulting, engineering, pharma, etc. – from both the private and public sectors.

The learning is *hands-on and interactive*: Participants role-play real business cases, work in teams and network throughout the programme. Tuition is delivered by experienced, international practitioners.

World-class materials are not only comprehensive but designed for immediate workplace use.

No previous knowledge in Finance needed. All topics are covered from scratch. Participants new to Finance will be given special attention and resources including a hot-line with the trainers. The group will progress to an advanced level at fast progression.

One important objective of this course is to enhance participants' *Business English Skills*.

The main areas covered by the syllabus:

- Financial Reporting and Financial Statement Analysis under IFRS with comparison to US GAAP
- Financial Strategies: Valuations, Risk Management and Mergers & Acquisitions
- Strategic Planning, Performance Management and Monitoring and Controlling

Course methodology

- The courses are intensive (9.00 a.m. to 4.30 p.m. CET) blending lectures, workshops, case-studies, self-study with tutor hot-line, progress tests and tutor feedback.
- The entire programme is practical: short cases will be used to enable students to view the real-life application of the concepts taught. There will be need for time spent on case solving in groups and time to review tutor feedback. This will help you consolidate knowledge and skills effectively.
- This programme is designed for the busy professional. *Materials are specially designed* to motivate self-study, and students will have a hotline to their tutor throughout the course to ask for advice as and when necessary.

It was quite a journey! Fully digital, practical and interactive. Experienced practitioners taught us how the theory becomes reality in the financial world. Inquisitive bunch of colleagues at their screens, asking, enquiring, commenting and sharing. Breakout sessions, where we practiced learned skills with friendly help from our trainers being just one click away. Home study supported by a hotline with our trainers.

This program has definitely helped me to grow! Without proper understanding of finance, you can't add value to your businesses. I feel more at ease now to discuss with folks from the finance community and participate in financial decisions.

Dr Agata Aniela Przygoda Cohort V

Online delivery

This is a live online training program with the following features:

- 'Classroom effect' so that everyone, no matter which country from, knows who the other participants are and can communicate with them and the tutors effectively. Also maintaining interaction, sharing knowledge and supporting each other during case study solutions;
- An international community where candidates bond beyond borders, sharing work, life, and laughter – forming lasting professional and personal connections;
- Downloadable and world class materials all in one location, printable;
- Surveys, polls, MCQs and open questions during the training: responses broadcast in real time (under the trainer's control);

All our trainers have many years of experience in online training delivery.

Programme

Financial Reporting and Analysis under IFRS with comparison to US GAAP

- This module will focus on gaining a thorough understanding of how to read, analyse and interpret a set of financial statements in order to assist in decision-making such as whether to lend to or invest in an organization or in identifying weaknesses in an organisation and suggesting possible cures. A Finance 4.0 model will be used adding value to the business.
- To do that, the participants will be introduced to the need for financial reporting and how business decisions impact the financial statements. Then the course will go through accounting techniques such as asset valuation, profit measurement, the requirement for group accounts, financial instruments, leasing and the need for various disclosures.
- As we go through the accounting techniques, participants will learn the significant differences between international rules (IFRS) and American rules (US GAAP) as the main basis for presenting financial statements. It will then become more apparent how business decisions impact the ratios that analysts use,
- The course will go further and look at financial assets, such as investments in shares and bonds, and financial liabilities, such as issued bonds and taken loans, and derivatives, to see how they are accounted for, particularly under IFRS 9. We will see how contracts in derivatives, entered into for financial risk management purposes, are presented in the financial statements of a company. We will get acquainted with hedge accounting and learn how it can impact the way derivatives are presented in the financial statements.
- The issue with loans and impairment and how it impacted on the banks under IFRS 9 is another hot topic in the programme.

Objectives

To understand in a practical context accounting principles and techniques to help further in:

- Appreciating the requirements of IFRS and US GAAP;
- Understanding current practices in corporate financial reporting and fundamental theoretical issues, relating to asset valuation and income determination;
- Analysing and interpreting at an advanced level financial statements and related information with different user groups whether prepared under IFRS or US GAAP;
- Understanding the impact of changes in accounting policies and the regulatory framework on shareholder value;
- Acquiring skills in linking financial information to value adding of your business thus applying Finance 4.0;
- Aligning your goals with those of a lean organisation having in mind the key stakeholders and their demands.

Financial Strategies

The nature and scope of strategic financial management is seen to be that area of a company's overall strategy that falls within the scope of the financial managers. We will examine how financial managers align investment and financing decisions with organisational objectives from the key stakeholders' point of view in a national but also an international environment especially that of multinationals.

The course will examine investment and financing decisions, looking at the strategic consequences of making such decisions. Candidates will develop skills in planning and evaluating strategic acquisitions, mergers and corporate re-organisations, including cross-border transactions, post-merger integration issues and valuation of synergies.

The existence of risks in business is then analysed and in particular Foreign Exchange and Interest Rate Risks. Attention is given to sophisticated strategies which are employed in order to manage and hedge against such risks.

Objectives

- Identify key stakeholders and understand potential conflicts in organisational aims and objectives.
- Calculate present values (PV) including the application of annuity and perpetuity formulas.
- Apply valuation models for debt and equity, including dividend discount, free cash flow, and the various multiplier based models.
- Estimate free cash flows for financial planning and corporate valuation.
- Assess the sensitivity of project NPV to changes in key variables.
- Apply portfolio theory to financial decision-making.
- Evaluate the impact of varying capital structures on the cost of capital.
- Discuss the relevance of the cost of capital for unlisted companies and public sector organisations.
- Address practical challenges in estimating discount rates, and the inherent margins of error.
- Analyse the interaction between investment and financing decisions.
- Estimate the value of potential acquisition target companies, identifying and quantifying synergies.
- Understand Divestments and Management buy-outs and buy-ins.
- Explain the nature and application of futures, options, swaps and FRAs.
- Design and evaluate derivative-based financial engineering solutions for risk management and understand their impact on financial statements and the relevant ratios.

Strategic Planning and Controlling

We continue with another case-based module that gives a strong overview of the strategic role of Management Accounting in planning and controlling performance with the aim of supporting strategic goals. Participants will explore how financial and non-financial information can be used to guide decision-making, monitor performance, and drive organisational success.

Special focus is given to understanding how performance measurement systems are designed, implemented, and critically assessed to ensure alignment with strategic objectives. The case studies are from real life and require participants to apply knowledge, skills and professional judgement, and act as they would do in the workplace.

A variety of strategic business models are introduced and applied throughout the case work to ensure participants develop both technical expertise and strategic insight. Key frameworks covered include::

- SWOT Analysis, Value Chain Analysis and Porter's Generic Strategies.
- PEST Analysis and Porter's 5 forces, including such areas as political climate and market conditions.
- Mendelow's Stakeholder Mapping Matrix, supporting the evaluation of stakeholder influence and interests.
- The Balanced Scorecard approach as a way in which to improve the range and linkage between performance measures.
- Fitzgerald and Moon - Building Block Model as it applies to modern organisations.

The module is designed to support the candidates in roles as managers but also as advisors to senior management on how to assess and control performance and recognizing early signals if an entity is vulnerable in certain areas.

Objectives

- To provide skills that are needed to participate effectively in strategic decisions in Planning, Budgeting and Controlling.
- To ensure candidates have sufficient knowledge, awareness and skills so that they can apply judgment and technique in the analysis of relevant data.
- To ensure candidates can provide management with the information required to contribute to a range of strategic planning, control and decision-making situations.
- To strengthen participants' ability to design, implement, and evaluate performance measurement systems aligned with strategic objectives.

Registration details

Application process:

Polish speakers can register directly via this [link](#) 

IMPORTANT! The registration process is in Polish and therefore English speakers should contact us at azucho@sgh.waw.pl to guide you.
